**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1, 3-62 and 64-72 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach the limitations of watermarking both the reduced data signal and the remainder signal to produce an output, wherein the remainder signal is the result of subtracting a reduced data signal from an original data signal. The closest reference reduces a data signal and subtracts the reduced data signal from the original data signal to produce a remainder signal, as required. However, the reference falls short in the area of watermarking both the reduced data signal and the remainder signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Scott Moskowitz (inventor) on June 7, 2006.

1. (Currently amended) A method of protecting a data signal comprising the steps of:

applying a data reduction technique to reduce the data signal into a reduced data signal;

subtracting said reduced data signal from the data signal to produce a remainder signal;

embedding a first watermark into said reduced data signal to produce a watermarked, reduced data signal;

embedding a second watermark into said remainder signal to produce a watermarked remainder signal; and

adding said watermarked, reduced data signal to said watermarked remainder signal to produce an output signal.

2. (Canceled).

3. (Currently amended) The method of claim 1, wherein at least one of the watermarks is embedded using at least one cryptographic key.

4. (Currently amended) The method of claim 1, wherein at least one of the watermarks is embedded using a cryptographic key pair.

Art Unit: 2136

9. (Currently amended) The method of claim 1, wherein at least one of said first and second watermarks is selected from the group comprising forensic watermarks and universal copy control watermarks.
